SHOPPING TROLLEYS

Shopping trolley is a concrete proposition for the shops and markets. It allows for comfortable and handy transportation of purchased goods. Good constructional solutions (pretty form of container, variety of the capacity, oval or round handles, oval plastic ends of the handles, wire valve with the plastic toddler seat, bottom stand made of oval profile, good quality wheels, optionally a bottom wire shelf in model CLASSIC) make us to be up with different expectations of our Customers. Connection of ergonomic construction with aesthetic form and manufacture make shopping with our trolleys feel like pleasure.

Hadles used in our shopping trolleys are adapted inter alia to the locks for coins produced by company Systec POS-technology GmbH.

TRANSPORT TROLLEYS

Platform trolley is a concrete logistical proposition for the shops or garden and constructional markets. It allows for comfortable and handy transportation of purchased goods. Good constructional solutions (wooden or wire platform, variety of the size of the platform, optional top wire basket, interesting design of the bottom structure with use of round, oval or rectangular profiles, oval or round handles) make us to be up with different expectations of our Customers. Connection of ergonomic construction with aesthetic form and manufacture make shopping with our trolleys feel like pleasure.

Handles used in our shopping trolleys are adapted inter alia to the locks for coins produced by company Systec POS-technology GmbH.

ELECTRONIC ENTRANCE GATE PORTA'E RADAR

An electronic gate Porta'e RADAR is steering by radar as standard without lighting. Gate can be available in two option: right or left - opens in right side or left side. The gate opens automatically in the direction of entry as you approach it. The gate closes also automatically.

Installed "anty-panic" system prevents from opening a gate in opposite direction. This system allows you to open an emergency gate at the appropriate pressure despite the blockade. Gateway attached to the ground.

As an option, it is possible to mount an arm to the gate:

- plexiglass (thickness 8 mm),
- with engraved drawing,
- illuminated (the effect of lighting is visible on the engraved drawing and on the edges of the arm).

ELECTRONIC GATE PORTA'E NOON WITH A CODE SCANNER (THE SELF-SERVICE CHECKOUT ZONE)

For protection reason of self-service checkout area against thefts, it is required a system able to verify whether the customer has paid for his shopping.

Such solution is provided by our original computer program integrated with the barcode scanner or QR checks the validity of the receipt and after scanning it opens the gate or informs about the non-compliance of the receipt.

Exit Control System self-service checkout zones:

■ Basic equipment:

Electronic gate opening to left or right side with motor and motherboard stand with code scanner

■ Accessories:

Racks, cross tubes and many other elements, thanks to which you can tightly designate zones and target the customer

■ Coating:

powder-coated or chrome

■ Dimensions:

Height of stand and gate: 1120mm
Diameter of stand and gate post: 120mm
Width of passage: max. 1150mm for one gate

Integration of the gate system with a code reader into the self-service checkout zone:

MECHANICAL ENTRANCE GATE PORTA'M

The gate can be available in two option: right or left - opens in right side or left side. It depends on the type of the mounted spring. The gate can be opened by pushing the arm toward the entrance and it closes automatically.

Installed “anty-panic” system prevents from opening a gate in opposite direction. This system allows you to open an emergency gate at the appropriate pressure despite the blockade. Gateway fixed to the ground.

CLAMP FOR FIXING THE CHECKOUT BARRIER

Example of use of the clamp

The clamp is used to fix the checkout barrier to the room partition H-1085 mm (gates compatible with the clamp are set out in are specified below). The clamp is applied to the transverse tube of room partition with a diameter of 40mm. Pipes are then bolted together with the partition, and clamp is stiffened by tightening the grub screws. The checkout barrier can be fixed to the clamp from one or both sides.

Technical data:

- Structure made of closed profiles, mesh made of steel bars. Base made of plywood (anti-slip, waterproof, double-sided foiled), fitted with 4 swivel castors.
- Two wheel lock systems - directional lock on two wheels (allows stable guidance when container is heavily loaded) and travel lock acting as brake to prevent container from moving on its own.
- Handle on the side of the container - for easier transport of the container.
- Straps with safety fasteners - 3 pcs. - securing the goods against falling out of the container.
- Pocket on the left side - allows the insertion of a label/ A6 sheet.

Finish: zinc plated + lacquer

DISPLAY TABLE 1200X800 H-850/650

OPTIONAL EQUIPMENT:

An optional set of wheels mounted on the table makes it easy to move the table.

Display tables allow for presentation of small and unwieldy goods. The construction ensures that the display table is very stable and highly resistant to damages. The bottom reinforced with flat irons allows for exposition of goods with various sizes and weights. There is possibility of adjust the height of the bottom on two different levels at the same time. The table has additionally a divider. The construction allows for easy disassembly of the table. Divider and bottom split into two separate parts allow the exposure of different types of assortment at the same time.

Standard finish: zinc plated + lacquer or bright chrome. The bottom of the table is zinc plated + lacquer.

Technical data: Structure made of section, side meshes and the divider made of steel wire. Legs are screwed together with a lower frame and the side mesh panels are directly attached to the legs. Bottom made of steel wire is reinforced with flat iron and it consists of two parts.

Maximum loading: ca 200 kg (with equable spreading of the goods).

OVERHEAD ATTACHMENT TO THE DISPLAY TABLE 1200X800 FOLDED INTO VERTICAL POSITION

Optional equipment:

- Adapter to overhead attachment - allows, that overhead attachment for mounting on a 1200x800 vertically folding table can be mounted on other display tables (with legs from section 30x30x2 mm and 30x30x1,5).

-The possibilities of mounting:

- Overhead attachment can be mounted directly on display table with legs from section 25x25x1,5 mm (display table 1200x800 folded into vertical position).
 - Adapter to overhead attachment 30x30x2 allows assembly of overhead attachment on display table with legs from section 30x30x2.
 - Adapter to overhead attachment 30x30x1,5 allows assembly of overhead attachment on display table with legs from section 30x30x1,5.

An overhead attachment is a simple and reliable means for displaying lightweight products with small dimensions. Easy assembly with the display table makes it possible to show a greater quantity of products, creating additional sales areas.

Standard finish: zinc plated + lacquer or bright chrome.

Technical data: The frame of overhead attachment is made from section, stuck in the display table legs (after removing plugs from the display table). The shelf of overhead attachment is made from wire, reinforced with flat bars, fixed on brackets which are stuck in the perforation of the frame of overhead attachment. Side walls are fixed in bracket with the possibility of folding. There is a possibility of mounting price strip at the front of shelf.

Maximum loading: 75 kg (with equable spreading of the goods).

PALLET CONTAINER 1200x800

This pallet container is a full value container, making it possible to store and transport loose goods, without using euro pallets. It allows for stacking up to three containers (pallet container and the pallet) and reducing to 1/4th the warehouse floor space necessary to store the same quantity of goods. Metal feet allow the container to be lifted up by a fork-lift and also facilitate cleanliness in the warehouse.

During transportation, it is possible to stack two of these containers, one on the other (total height of 1900mm), allowing for optimal utilization of the vehicle's cargo carrying capacity. A half-open frame on the front wall allows for easy access to the goods stored inside the container. The ability to place substantial loads within a single container means that it is not only useful as a container for loosely packed lightweight goods, but also as a stable system for organizing heavier products within a small amount of floor space, maintaining easiness of their movement. Its small dimensions after folding means that when a container is not being used, it does not take up unnecessary warehouse space.

Standard finish: zinc plated + lacquer.

Technical data: The pallet container is made of steel wires (spot welded mesh). From the top, it is finished with z-profiles. On front side it has a half-opened frame.

Loading capacity (with equable spreading of the goods):

- 1 pallet container: 1000 kg,
- 2 pallet containers: 1000 kg+750 kg,
- 3 pallet containers: 750 kg+750 kg+500 kg,
- 4 pallet containers: 500 kg+500 kg+500 kg+500 kg.

PALLET BOX 1200X800

This pallet box together with the wooden pallet creates a full value container, making it possible to store and transport loose goods, using of the pallets. It allows for stacking up to three units (pallet box with a pallet) and reducing to 1/4th the warehouse floor space necessary to store the same quantity of goods. During transportation it is possible to stack two pallet boxes with pallets (total height of 2040 mm), allowing for optimal utilization of the vehicle's cargo carrying capacity. An half-opened frame on the front or side wall allows for easy access to the goods stored inside the box.

The ability to place substantial loads within a single box means that it is not only useful as a container for loosely packed lightweight goods, but also as a stable system for organizing heavier products within a small amount of floor space, maintaining easiness of their movement. Its small dimensions after folding (thickness of only 90mm) means that when a box is not being used, it does not take up excessive warehouse space.

Additional accessories: divider H-766 (to pallet box 1200x800)

Standard finish: zinc plated + lacquer.

Technical data: The structure of the box is made of steel wires and spot welded mesh. From the bottom and the top it is finished with z-profiles. Frame opens to the short or long side.

Loading capacity (using europallets and when equally loaded):

- 1 pallet box: 900kg;
- 2 pallet boxes: 900kg+750kg;
- 3 pallet boxes: 900kg+500kg+500 kg;
- 4 pallet boxes: 900kg+500kg+300kg+300 kg.

STAND FOR WASTE SEGREGATION (FOR 3 SACKS)

In connection with the amendment of the Act on maintaining cleanliness and order in municipalities we meet the needs of municipalities and communes as well as households in the segregation of waste and protect the environment. Stand for waste segregation is a simple and versatile tool for segregate garbage into three basic types.

Light and simple design allows for easy assembly and distribution of the rack.

The way of mounting the garbage sacks with rubber putted on the rim is very quick and simple.

Standard finish: zinc plated + lacquer or zinc plated + powder coated (standard colors RAL 7016 and RAL 6005).

Technical data: construction made of sections, rims and covers made of metal sheet. The covers are hinged, used elastic rubber band on the rim protects the bag from sliding off the rim. You can fix the stand to the ground.

OUTDOOR GONDOLA (for the sale of goods on petrol stations)

This gondola with a rolling shutter and wheels is a presentation device mainly used to display and store materials that are particularly sensitive to external factors. Due to its structure and the use of shelves inside, the gondola can be used to store smaller products, such as those in containers and bottles. This product is particularly dedicated to the petrol stations. Due to its built-in lock, the rolling aluminum shutter ensures the safety of the goods located inside. An additional advantage of the gondola is its wheels, allowing it to be easily moved.

Standard finish: electroplated with zinc and next polyester powder coated.

Technical data: The gondola is made of metal sheet, sections and flat irons that reinforce its construction. It is equipped with an aluminum rolling shutter that has special plastic sliders, a push button type lock with a set of keys, four brackets, two perforated shelves for displaying of the goods and four polyamide wheels with a diameter of 100 mm (two of the wheels are equipped with breaks).

Maximum loading:
(with equable loading):
shelf - 75 kg,
bottom of the gondola - 150 kg.

In the option one can be install anchors for fixing to the ground or regulated feet instead of wheels.

STACKING BASKETS

Example of application

Standard finish: zinc plated + lacquer or powder coated.

Technical data: The structure of basket made of spot welded wire. The bottom is reinforced with flat irons against deformation. Stacking feet made of wire. The movable chassis made of sections.

Maximum loading:

(with equable spreading of the goods): single basket - 100 kg,
3 stacked baskets - 100kg/50kg/50 kg.

Baskets are mainly intended for storage and loose display of fast-rotating goods in stores and supermarkets.

Possible use of baskets:

- setting on the racks shelf,
- placed directly on the ground,
- stacking baskets one on another,
- assembly on the movable chassis.
